alkitronic® Compact-Pneumatic-Torque-Wrench **CLS / CLS2 / CLD**

- ✓ Compact-Pneumatic-Torque Tool for continuously rotating loosening or tightening of bolted connections
- ✓ **Heavy-duty gear box** - highly developed and proven
- ✓ Pneumatic-drive - **reliable** and **robust**
- ✓ Mechanical selection switch for **power/run-down gear** (CLS-2 gear)
- ✓ Upon request: Execution with locking flip switch or continuous operation for CW-/CCW direction
- ✓ Environmentally positive because of its **low noise level** (optional)
- ✓ Torque setting according to torque flow chart

Optimal applications for areas with air supply systems and in high explosion-risk areas.

alkitronic® **CLS / CLS2**

Principle of construction:

Rigid connection between operating element and power gearing!

Through the tothing on the reaction support (DMA) and the external tothing of the tool, the position of your Compact-Pneumatic-Torque Wrench can be changed in approx. 10-15 degrees by each step.

- ✓ **alkitronic® CLS**
The ideal series for low output ranges, from 60 Nm up to 3500 Nm.
- ✓ **alkitronic® CLS2**
The powerful universal tools for screw connections where flexibility and high output power are required. Mechanical changeover from **run down gear** to **power gear**. You will reach torque ranges from 120 Nm up to 48000 Nm.

alkitronic® **CLD**

Principle of construction:

Free joint execution!

After fixing your reaction support (DMA) you will be able to reach any position you may require (rotatable 360 degrees)

- ✓ The ideal torque wrenches with high comfort for operating in narrow spaces - torque ranges from 150 Nm up to 11200 Nm.

Technical Informations **alkitronic**® CLS / CLS2 / CLD

alkitronic®-Compact-Pneumatic-Torque Wrenches for a non-pullating operating at site.

A Standard version noise level = 78 dB(A)

B Special version (optional)

The noise level will amount 66-78 dB(A) according to the number of used sound absorbers and an air pressure of 6 bar.

By using sound absorbers take notice that the torque values of the flow chart will not be the same. Approx. 10% deviation of the stated torque values is possible. Flow chart values have to be corrected correspondingly.

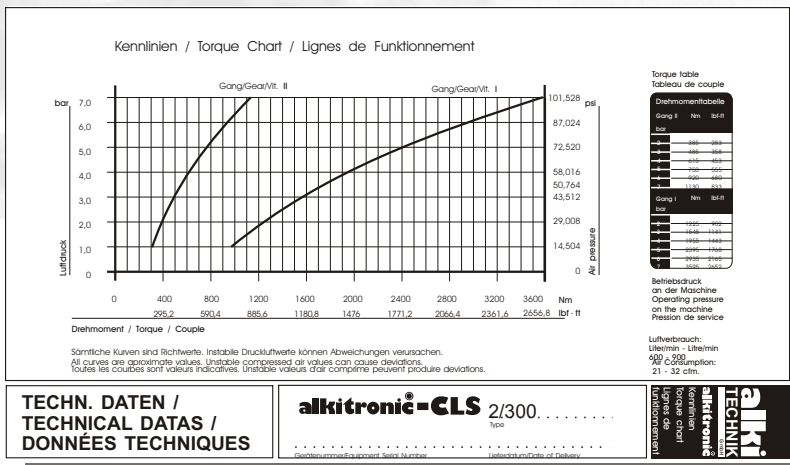

alkitronic®-Compact-Pneumatic-Torque Wrenches with lower noise level are controlled and approved by the German TÜV PRODUCT SERVICE.

Standard version:
Flip switch (CW-/CCW direction), changeover switch for run down gear/power gear (CLS2)

Special execution with locking flip switch for CW-/CCW direction (continuous operation). Positions flip switch: R - ● - L

Example:
of a **torque flow chart** stating the torque values reached by the corresponding air pressure.

alkitronic® CLV

- ✓ Small, compact and powerful
- ✓ CW-/CCW operation via the remote control FBL
- ✓ The ideal **principle of construction for Remote-Systems** (the optimal solution for the simultaneous use of several torque tools)
- ✓ Optimal application for **series-assembly** and **half-automatic operation**
- ✓ Environmentally positive because of its **low noise level**
- ✓ For continuously rotating to loosen or tighten bolted connections - **continuous operation and emergency operation** are possible
- ✓ **Heavy duty gear box** - highly developed and proven
- ✓ Pneumatic-drive - reliable and robust
- ✓ Torque flow chart with torque settings

Optimal operating in air supply networks and even in high explosion-risk areas.

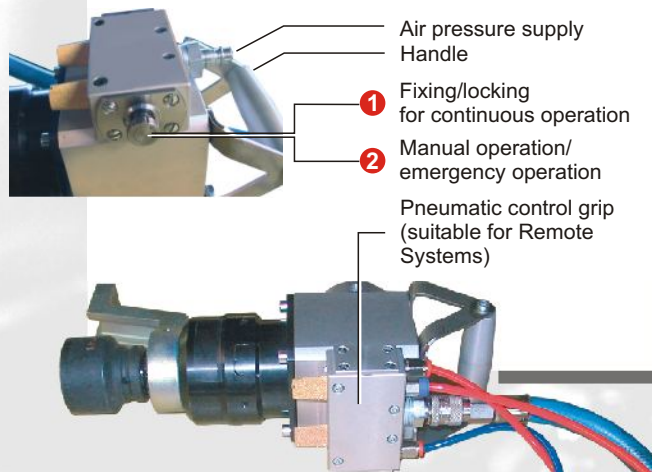

Technical Informations **alkitronic® CLV**

alkitronic® -FBL-DUO

Remote control

for 2 CLV-tools (principle description)

The perfect solution for a constant and simultaneous operation.

Version **FBL Quattro** (4 CLV-torque tool) upon request

General Informations **alkitronic® CLV**

alkitronic® - CLV Sound absorption and ventilator system

For further informations contact us!

alkitronic® - CLV Ventilator system High-quality external sound absorption for **CLV-Torque wrenches**

Technical Informations:

Optimum sound absorption depends on:

- how the ventilated air is drawn off (ventilator hose)
- the length and the cross section of the ventilator hose
- the construction of the sound absorber

The noise level is considerably influenced by these factors.

alkitronic® - CLV Ventilator system

Advantages

- low noise level
- no whirl of air when operating
- operation in ventilation free surroundings

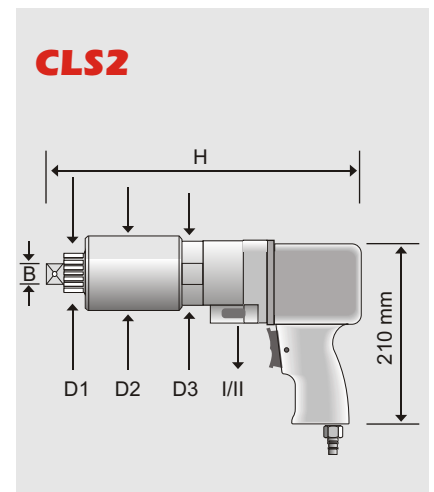

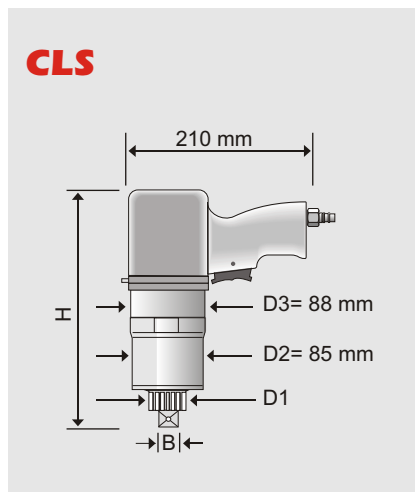

Technical Details:

Torque regulation of all CLV tools via air supply and a manostat of the maintenance unit. Torque exactness depends on a stable air network. An air pressure of 2 -7 bars at an air volume of approx. 10-15 l/sec ensures optimal operating

Accessories:

Maintenance unit complete with filter, regulator, lubricator as well as spiral hose of 5 meters length including couplings. In order to maximise operational safety and the lifetime of the motor, the pressurized air should be fed by means of a lubricator with a fine oil spray.
