

## JAKE Boom Support

A **JAKE** Boom Support with a **JAKE** Mounting Kit increases a tractor's pulling power because the weight of the crane falls on pulling wheels but not on a trailer's load. The **JAKE** Boom Support provides a good balance for the tractor during its road driving and improves runnability of the tractor due to even distribution of the weight of the crane between axles. The **JAKE** Boom Support is also possible to use with different harvester units, not only with a standard grapple.
