

JAKE Support Legs

JAKE Support Legs provide a stable balance of a tractor outfitted with a crane and are designed to be mounted on **JAKE 600**, **JAKE 800**, **JAKE 800 HD** and **JAKE 800 Tilt Mounting Kits**. Depending on characteristics of the tractor and the crane and a performing work we can offer three different types of the support legs: **JAKE** Standard, **JAKE** Tele and **JAKE** Heavy Duty.

JAKE Tele

The **JAKE** Tele legs are intended to be mounted on the **JAKE 600**, **JAKE 800**, **JAKE 800 HD** and **JAKE 800 Tilt Mounting Kits** for increasing stability of a tractor-crane combination during its working. The **JAKE** Tele has the advantage to be used in a limited space, e.g. for a wood chipper work, and they are powerful enough to lift and hold up rear wheels. The width and the height of the **JAKE** Tele are adjustable and can be set up so that their width is not wider than the tractor width. The maximum width of the legs at the lower position is 3,4 metres. The **JAKE** Tele legs are also very helpful in improving working conditions of a driver.
