

# **BUILT FOR WORLD'S BEST HORSES**

## **Product sheet: SAFETY-WALL™ door system**

Horseback riding is not always without risk and safety is very important. The Q-line safety wall protects you and your horse from contact with the outer walls of the riding hall.

Indoor riding halls have to meet a lot of safety demands and for good reason. Even indoors riders can achieve great speeds and this is not always without danger. The walls are often covered with wood or steel and can cause injuries to horse and rider on contact.

The specially developed Q-line® safety wall heightens the safety in indoor halls. The lightweight synthetic safety wall is shock absorbent and offers the horse and its rider protection from contact.

The synthetic material in the Q-line® safety wall is specially developed and produced under the highest technological standards so it can offer you and your horse maximum quality and protection. The wall is waterproof and can resist any mechanical load. The special synthetic material and smooth finishing make the safety wall extremely hard to damage and it therefore has a very long lifespan.

Invest in your safety and that of your horse with Q-line.

### **Unique benefits**

#### **Safety**

With the smooth surface and shock absorbing qualities of the Q-line safety wall, you and your horse are protected against contact with the walls of the riding hall.

#### **Durable**

The safety walls are made from special waterproof and shock absorbing synthetics for use in indoor halls and last a lifetime.

#### **External characteristics**

A stylish design in any possible colour allows you to add your own style to the appearance of your riding hall.

#### **Maintenance**

Because of the smooth surfaces and non stick qualities dirt can't stick to the wall. The safety wall is easily kept clean by simply spraying the wall with water.

#### **Easy to install**

The Q-line® has been designed to be incredibly user-friendly. The safety wall can be installed by use of a few attachment points.

No technical knowledge is required.

# **BUILT FOR WORLD'S BEST HORSES**

## **Product sheet: SAFETY-WALL™ door system**

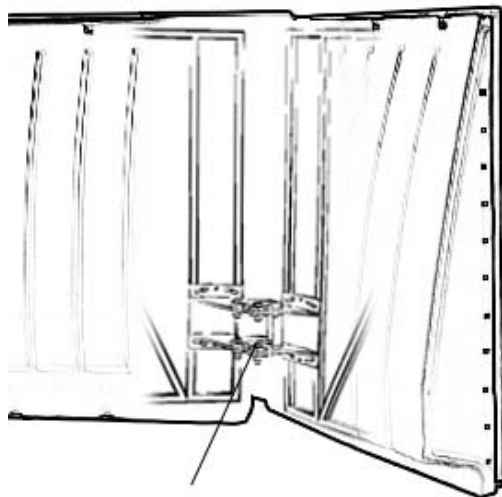

Q-line® has succeeded to produce a unique hinge for the safety wall. With this hinge the wall can be opened horizontal ( just like a normal door)

The hinge is fully adapted in the wall and in closed situation you cannot see there is a door in the wall. This is the perfect finishing.

You all know the problem, opening a inclined arena kick wall in the indoor arena. That's why the hinge can also be bought separately so all situations can be adapted to a safe and sound door system.

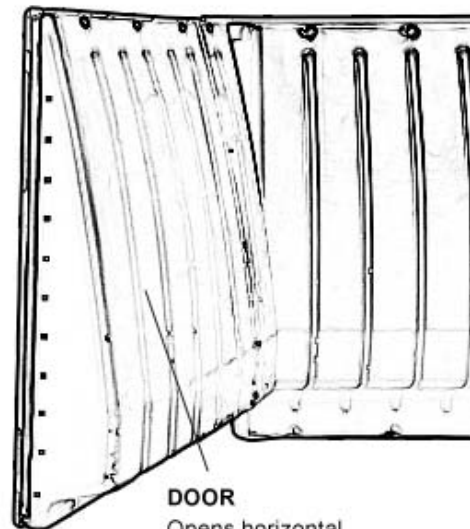

- Safe
- Open horizontally
- Clean finish
- No Sharp edges
- Easy to install

### **EASY FIXING**

**HINGE**  
Fully integrated
